

FAJAR ARIEF BUDIMAN

Fullstack Developer | Go · PHP · Ruby on Rails · Flutter · React · PostgreSQL
Jakarta | budimanfajar660@gmail.com | +6283873630760 | fajarariefbudiman.vercel.app

PROFESSIONAL SUMMARY

Fullstack Developer with 2+ years of professional experience architecting and shipping production-grade systems across diverse industries. Currently holds concurrent fullstack roles building customer-facing platforms and internal tooling end-to-end - from React.js frontends to Go, PHP (Laravel), and Ruby on Rails backends, containerized with Docker. Specialized in RESTful API design, JWT/RBAC authentication with multi-tenant isolation, media/logging infrastructure, and admin panel development. Experienced with Odoo ERP (v15) customization across FAAT, SCM, and Manufacturing modules, and third-party integrations including Xendit Payment Gateway. Independently designed and shipped three free mobile apps - Finora (financial tracker), Kurva (POS), and Navila (couple finance & wedding planner) - for Indonesian SMEs and young entrepreneurs. Track record spans franchise POS platforms, healthcare ERP, clinic management systems, and personal finance applications.

TECHNICAL SKILLS

Languages: Go (Golang), PHP, Ruby, JavaScript, TypeScript, Dart, SQL, HTML5, CSS3

Frameworks: Laravel, Gin (Go), Ruby on Rails, Flutter, React.js, Bootstrap 5, Tailwind CSS

Databases & Tools: PostgreSQL, MySQL, SQLite, Redis, Git, Docker, Postman, Linux CLI, VS Code

ERP & APIs: Odoo ERP, RESTful API, JWT, OAuth2, RBAC, Signed URL, Xendit Payment Gateway

Practices: Clean architecture, MVC, API versioning, DB optimization, agile/scrum, containerization (Docker)

PROFESSIONAL EXPERIENCE

Fullstack Developer - PT Kuliner Kreasindo Inovasi Dec 2025 - Present

- Designed and built a crew attendance system from scratch for outlet staff using React.js and Go, containerized with Docker - covering clock-in/out tracking, detailed attendance records, and an integrated payroll/salary calculation module.
- Developed the admin panel/backend dashboard for the Centralized Partnership & POS Platform, serving hundreds of franchise partners with 30+ RESTful API endpoints covering order management, inventory, authentication, and RBAC.
- Integrated Xendit Payment Gateway for automated payment verification on Repeat Orders and Sales Orders.
- Managed and customized Odoo ERP (v15) modules across FAAT, SCM, and Manufacturing divisions for procurement, inventory.

Fullstack Developer - PT Gerin Mitra Husada Dec 2024 - Nov 2025

- Delivered Dokterhub, a full-featured clinic ERP (Laravel 10 + Bootstrap 5) supporting 3+ departments, including real-time patient-doctor chat via Laravel Broadcasting & Pusher.
- Built automated PDF generation for medical records, prescriptions, and billing using DomPDF, reducing admin workload by 80%.
- Implemented RBAC for staff, doctor, and admin roles across all clinic modules.

INDEPENDENT PROJECTS

Finora - Mobile Financial Tracker (Flutter) 2026

- Personal finance app with income/expense tracking, investment monitoring, budget goals, savings targets, and non-financial habit goals (e.g., daily gym) that don't affect cash flow, built on double-entry accounting principles.
- Released free for Indonesian SMEs and young entrepreneurs to promote financial literacy and accounting awareness.

Kurva - Full-Stack POS & Analytics (Flutter + Ruby on Rails) 2026

- Evolved Kurva from a mobile-only app into a full-stack solution: Flutter frontend connected to a Ruby on Rails backend with a PostgreSQL database via REST API.
- Beyond core POS functions (product catalog, transaction processing, sales history), added CAPEX, OPEX, and COGS tracking to give business owners real profitability visibility instead of just gross sales.
- Added time-based sales analytics surfacing peak vs. quiet hours/days, helping owners plan staffing, stock, and promotions around real demand patterns.
- Distributed free to lower the barrier of digital sales adoption for small and micro businesses.

Navila - Mobile Couple Finance & Wedding Planner (Flutter + Golang) 2026

- Designed and developed Navila, a Flutter app combining financial management with wedding planning for couples, offering a solo mode for single users and a couple mode for those in a committed relationship, each with its own visual theme.
- Built a shared wallet and budget couples can manage together, transaction and cash flow tracking, a fund-change-request approval system for transparency between partners, a wedding planning module with checklist categories and subtasks, savings/goal tracking, and real-time notifications.
- Backed by a Go REST API with a MySQL database handling authentication, data sync, and notifications, with the Flutter frontend using Provider to keep data, service, and presentation layers cleanly separated.

EDUCATION

Bachelor of Computer Science - Informatics Engineering - University of Pamulang 2023 - Present
SMA Negeri 4 Kabupaten Tangerang 2020 - 2023
